

## Ecount ERP

### Web-based ERP for small and medium-sized businesses

Ecount ERP is a web-based ERP developer for small and medium-sized businesses. Ecount, founded in 1999, now services over 10,000 clients worldwide. Ecount strives to create the best and most affordable ERP solution available. Many small businesses need an internal management system, but lack the capital or resources required to employ other ERP solutions. With Ecount ERP, business managers can oversee the daily activities, reduce the number of hours wasted on redundant work, decrease their dependency on Excel, and gain greater insight into their overall business operations.

### Why choose Ecount ERP?

- **Developed, integrated features** – Ecount ERP provides features most small and medium-sized businesses require. These features are fully integrated and fully functional, which include accounting, inventory, production, purchasing, sales, and collaboration modules.
- **Short deployment and implementation** – Unlike many on-premises ERP systems requiring installation, Ecount ERP does not require months of development and implementation. The program is made available to you in just a matter of hours, not months.
- **Higher user adoption rate** – Ecount provides a customizable ERP program that allows users to make menu configurations according to the needs of their company, which often leads to a higher rate of adoption. Over 95% of Ecount clients have successfully implemented the system, resulting in overall user satisfaction.
- **Return on investment** – Most ERP systems require capital, IT resources, and time. All of these add up and it can take anywhere between 2-5 years to break-even and see a return. This is true of both on-premises ERP and other SaaS ERP providers. With Ecount, companies will be able to hit the break-even point and see a ROI in much less time.
- **Clear cost of ownership** – The yearly subscription to Ecount ERP is only \$600. There will not be additional costs for configuration or even costly upgrades in the future.

- **Scalable program** – Ecount ERP is designed to grow and adapt with the evolving business environment. Ecount offers free scheduled upgrades to improve current features and add new ones. You will not be left with an obsolete system that is too costly or impossible to reconfigure.
- **Customizable** – The program is completely customizable for many different types of businesses and industries. Users can easily activate or deactivate features and modules. The entry screens and templates can also be customized to include important information.
- **Real-time reports** – Reporting is essential for sound decision making. Ecount ERP offers various financial, accounting, inventory, sales, and purchasing reports with customizable templates.

Collaboration (Groupware)		

### Additional Services

Program	Features	Price
Mobile ERP version	Supports iOS & Android (Gingerbread)	Free with subscription
Multilingual version	English, Spanish, Chinese, Japanese, Korean	
Customer Service (CS) Portal	Manage orders & purchase requests online	

### Why is the price so low?

The goal of Ecount ERP is to provide an affordable, yet fully functional, ERP system to small and medium-sized businesses. Over the past few years, Ecount's client base has greatly expanded and now includes over 10,000 active subscribers. Due to the increase in clientele, the overall operating cost of maintaining the program servers, software development and overhead, is distributed even further among the subscription fees collected from a larger number of clients. Furthermore, since the program is standardized, no additional costs are incurred from user configuration. Therefore, Ecount is fully capable of keeping the subscription fee for customers as low as possible.

## ◆ Program Features

### Accounting & Finance Management

The accounting module is a cloud-based accounting and financial management software that is integrated with all the other modules. Manage receipts, payments, accounts payable/receivable, notes payable/receivable, cash flow, fixed assets, invoicing, and multiple ledgers. With Ecount ERP, businesses gain greater insight into their costs, profitability, and expenses from all their vouchers and books. Users can pull information from the production, sales, inventory, or purchasing menus to invoice transactions, record cash payments and receipts, create sales slips or vouchers, and more.

- Easy to use for novice and experienced accounting clerks
- Reduce reliance on Excel spreadsheets
- Increase efficiency with less re-keying and redundant work
- Track expenses and costs by department, project, account manager, and more.

### Reporting

Many businesses find it difficult to create up-to-date inventory, sales, accounting/financial, purchasing, and production reports. As a result, the decision-making process is severely affected due to limited access to quick, accurate information. Ecount ERP helps alleviate these common issues for small and medium-sized businesses.

- Create real-time reports in less time
- Easier than creating templates and reports in Excel
- Create summarized or detailed reports
- Create individual or comparison view reports
- Can export all reports to Excel spreadsheets
- Generate historical reports to evaluate business trends

### Accounting & Financial Reports
